

New Home UI Impact Analysis

BI Report · May 2026

1

Methodology

Objective and methodology

Objective: Evaluate whether the **New UI drives higher product conversion** (application & issuance) compared to the Old UI.

Methodology:

- Compare customers behavior by the UI they were **actually using when they applied** — not just their onboard date
- Use Firebase login data to identify which app version each customer had at the time of application
- Apply **D0–D14 normalization** to ensure a fair comparison across cohorts (removes timing bias)

Timeline:

- UI change date (COT): Apr 27, 2026
- Observation window: Apr 7 – May 20, 2026 (± 22 days)

Target customer group

UI experience at time of application

- **New UI – OB after:** Onboarded on/after Apr 27 → entire cohort experienced New UI from day one, no further check needed.
- **New UI – OB before:** Onboarded before Apr 27, but had already switched to New UI **on or before their application date**
- **Old UI – OB before:** Onboarded before Apr 27, and was still on Old UI when they applied — either never upgraded, upgraded *after* applying, or never applied at all.

Note: Exclude no login data.

2

Demographic Profile

Demographic Profile: Comparable Cohorts

All three cohorts share a very similar demographic profile -- suitable for direct comparison.

Cohort	New UI - OB after	New UI - OB before	Old UI - OB before	Grand Total
	(n = 45,386)	(n = 6,040)	(n = 37,390)	(n = 88,816)
Female	31,7%	31,7%	32,4%	32,0%
Male	68,3%	68,3%	67,6%	68,0%

Cohort	New UI - OB after	New UI - OB before	Old UI - OB before	Grand Total
	(n = 45,386)	(n = 6,040)	(n = 37,390)	(n = 88,816)
1. Below 18	2,9%	1,0%	3,0%	2,8%
2. 18 - 25 y.o	56,0%	59,7%	54,9%	55,8%
3. 26 - 35 y.o	21,0%	23,8%	22,0%	21,6%
4. 36 - 45 y.o	12,7%	11,2%	13,0%	12,7%
5. above 45 y.o	7,4%	4,4%	7,2%	7,1%

VERDICT: All 3 cohorts are demographically comparable -- conversion differences are not explained by composition bias.

3

Key Findings

Conversion Funnel – D14 Normalized

Cohort	New UI	Old UI	Grand Total
	(n = 51,426)	(n = 37,390)	(n = 88,816)
Apply D14 rate	55,9%	62,1%	58,5%
Issuance D14 rate	19,2%	23,4%	20,9%

At the aggregate level, **Old UI** customers show higher apply and issued rates at D14 (62% vs 56%)

Cohort	New UI - OB after	New UI - OB before	Old UI - OB before	Grand Total
	(n = 45,386)	(n = 6,040)	(n = 37,390)	(n = 88,816)
Apply D14 rate	59,1%	31,5%	62,1%	58,5%
Issuance D14 rate	20,8%	7,3%	23,4%	20,9%

- However, when splitting New UI by onboarding timing, the two sub-groups behave very differently — suggesting **the timing of the UI transition, not the New UI design itself, may be the key driver of the gap**
- Product-level breakdown is needed to understand the consistency and breadth of this pattern

Product breakdown – Old UI vs New UI

Product	New UI	Old UI	Grand Total
<i>Base</i>	<i>n = 51,441</i>	<i>n = 37,399</i>	<i>n = 88,840</i>
APPLY D14			
Cash Loan	29.7%	32.2%	30.8%
Payday Loan	30.9%	32.3%	31.5%
Credit Card	12.9%	17.0%	14.6%
Term Deposit	2.8%	5.0%	3.8%
Group Account	0.5%	1.2%	0.8%
ISSUED D14			
Cash Loan	6.3%	7.2%	6.6%
Payday Loan	10.3%	10.8%	10.5%
Credit Card	1.3%	1.6%	1.4%
Term Deposit	2.8%	5.0%	3.8%
Group Account	0.5%	1.2%	0.8%

- Across all products, New UI shows lower apply and issued rates compared to Old UI
- The largest relative gaps appear in **Credit Card** (~17% vs ~13%) and **Term Deposit** (~5% vs ~3%)
- The pattern is consistent across every product with no exceptions — suggesting this reflects a **cohort-level factor rather than any product-specific issue**

Product breakdown – OB Cohort split

Product	New UI – OB after	New UI – OB before	Old UI – OB before	Grand Total
<i>Base</i>	<i>n = 45,400</i>	<i>n = 6,041</i>	<i>n = 37,399</i>	<i>n = 88,840</i>
APPLY D14				
Cash Loan	31.5%	15.9%	32.2%	30.8%
Payday Loan	32.7%	17.4%	32.3%	31.5%
Credit Card	13.9%	5.5%	17.0%	14.6%
Term Deposit	3.0%	1.2%	5.0%	3.8%
Group Account	0.5%	0.1%	1.2%	0.8%
ISSUED D14				
Cash Loan	6.8%	2.0%	7.2%	6.6%
Payday Loan	11.1%	4.1%	10.8%	10.5%
Credit Card	1.4%	0.3%	1.6%	1.4%
Term Deposit	3.0%	1.2%	5.0%	3.8%
Group Account	0.5%	0.1%	1.2%	0.8%

- When broken down by OB cohort, the picture becomes clearer: **New UI OB after performs comparably to Old UI** across most products
- **New UI OB before is consistently ~50% lower** than the other two groups — and this holds across every product without exception
- This suggests the gap is largely driven by customers whose journey was disrupted mid-way through the UI transition, **not by the New UI design or any product-specific dynamic**

4

Summary

Executive Summary – UI/UX Impact Analysis

- The New UI rollout coincides with a conversion gap — but the gap is not evenly distributed
- Customers who onboarded fresh onto the New UI (**OB after**) **perform on par with Old UI** across all products and metrics
- The underperformance is concentrated in **New UI OB before** — a transitional cohort whose journey was disrupted mid-way through the UI switch
- This pattern is **consistent across all products**, pointing to a one-time cohort effect rather than a design or product issue
- As the OB before cohort ages out, the aggregate New UI rate is expected to naturally converge toward Old UI levels

THANK YOU
